PATENT COOPERATION TREATY

From the INTERNATIONAL BUREAU

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

Commissioner
US Department of Commerce
United States Patent and Trademark
Office, PCT
2011 South Clark Place Room
CP2/5C24

Arlington, VA 22202 ETATS-UNIS D'AMERIQUE

Date of mailing (day/month/year) 11 April 2001 (11.04.01)	ETATS-UNIS D'AMERIQUE in its capacity as elected Office
International application No. PCT/GB00/03085	Applicant's or agent's file reference IPD/P2854/WOD
International filing date (day/month/year) 15 August 2000 (15.08.00)	Priority date (day/month/year) 18 August 1999 (18.08.99)

Applicant
GREENAWAY, Alan, Howard et al

1.	The designated Office is hereby notified of its election made:
	X in the demand filed with the International Preliminary Examining Authority on:
	26 January 2001 (26.01.01)
	in a notice effecting later election filed with the International Bureau on:
2.	The election X was
	was not
	made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).
	N .

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland Authorized officer

Pascal Piriou

EXAMINATION REPORT - SEPARATE SHEET

R Item V

Document US4849825, which is considered to represent the most relevant state of the art, discloses (cf. Figure 3) an apparatus for producing a plurality of spatially separated images (6a,6b) from an object field (1) comprising:

- an optical system (2,4) arranged to produce an image (7) associated with a first optical transfer function;
- a diffraction grating (3) arranged to produce, in concert with the optical system. images (6a,6b) associated with each diffraction order;
- ancillary optical modules (9a,9b) operating on individual diffraction orders;
- means for detecting the images (6a,6b) wherein
- the optical system and diffraction grating are located on an optical axis (see fig. 3), the diffraction grating is located in a suitable grating plane and the ancillary optical modules modify the transfer functions associated with the images (as they provide astigmatic power col.3 l.63-66).

The subject-matter of claim 1 therefore differs from this known apparatus in that the optical system and diffraction grating are arranged such that a plurality of object planes is imaged and each image associated with a diffraction order corresponds to a different object plane. The subject-matter of claim 1 is therefore novel.

The problem to be solved by the present invention may therefore be regarded as providing a three dimensional imaging device which is aberration corrected for a plurality of image planes.

Such a device is known from EP0517491 which provides a variable aberration correction with an adjustable optical element or a plurality of optical correctors which are inserted in the optical axis. However, this document does not teach a simultaneous correction and imaging of all object planes and it would not be obvious either to modify the apparatus according to US4849825 to provide multiple object planes. The subject matter of claim 1 appears therefore to be inventive.

Claims 2 to 10 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
